

VISION PLUS

Features

- Dyed for easy identification
- Detergent additives
- Superior freeze protection
- Surfactex® agent in Premium
- Highly effective detergent

Benefits

- Safe for all automotive finishes
- Promotes safer driving
- Repels water to aid in wet weather driving
- Keeps a cleaner windshield
- Cost effective Summer formulations

Irving **VISION PLUS** are high performance windshield wash fluids that are intended for the automotive market. They will promote safer driving by helping to keep the windshield clear of ice, snow, dirt and insects.

VISION PLUS PREMIUM is our best product ever. Not only does it offer the same performance as our regular **VISION PLUS**, we add Surfactex® creating an invisible water repelling barrier on the windshield for beading action along with a pleasant scent you can smell so you know it is working. **VISION PLUS PREMIUM** is available in two purple winter versions (-45°C & -20°C) as well as a red 3-season summer version.

WINTER VISION PLUS puts the accent on freeze protection with a full and honest -40°C freeze point. It will help keep the windshield free of ice and snow, and will prevent the wiper blades from sticking to the windshield. Because of its excellent freeze point, it will not freeze in the reservoir the lines or the nozzles, ensuring that there will always be a supply of the fluid the instant it is required. It is dyed a distinctive blue color to help motorists identify it as a product for winter use.

As with all products of this type, **VISION PLUS** is most effective when the windshield is warm. On cold windshields, remove large accumulations of snow and ice first, since these will damage the wiper blades, and warm the windshield a little before applying **VISION PLUS**.

SUMMER VISION PLUS contains special detergents that help to remove insects and road grime. This product offers limited freeze protection, unlike pure water and simple water-detergent solutions, to allow for limited cold weather use. It is dyed a distinctive green color to help motorists identify this as a product for 3-season summer use.

HANDY HINT: If smearing occurs, this is a sign that the wiper blade edges are worn and need replacing.

VISION PLUS fluids use super-pure and filtered ingredients, and they will not harm automotive paint, brightwork, wiper blades or other rubberized components. All fluids are available in our exclusive "Easy-Pour" 3.78 Litre bottle.

Typical Performance Results

GRADE	PREMIUM WINTER -45	PREMIUM WINTER -20	PREMIUM SUMMER	WINTER -40	WINTER -20	SUMMER
COLOUR	Purple	Purple	RED	BLUE	BLUE	GREEN
DENSITY (g/ml)	0.9310	0.9468	0.9933	0.9337	0.9490	0.9886
FREEZE POINT (°C) (°F) (See Note Below)	-45 °(-49)	-28 °(10)	-8° (17)	-40° (-40)	-28° (-20)	-8 °(17)
FLASH POINT (PMCC) (°C) (°F)				32.2 °(90)		67.8 °(154)

NOTE ON FREEZE POINT:

IRVING OIL USES THE FIRST APPEARANCE OF ICE CRYSTALS AS THE MEASURE OF FREEZE POINT. THIS DOES NOT SEEM TO BE STANDARD BUT IS, IN OUR OPINION, SAFER FOR THE CONSUMER. SOME COMPETITIVE PRODUCTS THAT WE HAVE TESTED CLAIM TO HAVE “-40” PROTECTION BUT WE SEE ICE CRYSTALS FORMING IN THEM AT TEMPERATURES AS HIGH AS -30°C. ICE CRYSTALS CAN PREVENT THE PROPER OPERATION OF THE FLUID PUMP AND BLOCK THE SPRAY NOZZLES, PREVENTING THE APPLICATION OF THE FLUID AT THE INSTANT IT IS NEEDED.
