

Tractor Hydraulic High Performance Fluid

Features & Benefits

- Superior load carrying and wear protection
- Excellent foam resistant properties
- Exceptional yellow-metal protection
- Shear stable
- Excellent frictional characteristics
- Superior fluidity at low temperatures
- Three formulations to suit your equipment's needs

Typical Results

Test Method	THF	THF Premium	THF (W)

Tractor Hydraulic Fluids are Universal Tractor Transmission Oils (UTTO) that are formulated for use in transmissions, final drives, power take-off, wet brakes, hydraulics, clutches, and power steering systems. Designed for use in agricultural, construction, and mining equipment that uses a common fluid reservoir.

Tractor Hydraulic Fluid is available in three different grades:

- **THF** is made with high quality group II base oils and recommend for summer operation, but also suitable for year round use where temperatures are above -25°C.
- **THF Premium** is full synthetic and a true "all season" fluid that is suitable in both hot and cold temperatures.
- **THF (W)** is made with high quality group II/II+ base oils and formulated for extra protection in the cold winter months. Meeting the requirements of J20D.

Tractor Hydraulic Fluids act as a universal hydraulic oil that protects against wear and prevents bronze transfer in piston pumps to prevent loss of efficiency.

Tractor Hydraulic Fluid's frictional characteristics prevent stick/slip problems and reduce brake noise/chatter. They also have superior fluidity at low temperatures with pour points as low as -42°C (THF), -64°C (THF Premium) and -50°C (THF W).

Tractor Hydraulic Fluids are not to be used in STOU engine applications.
